

COMARCH ECM

**IMPLEMENTATION OF
COMARCH ECM**

CEMEX

Cemex is one of the largest cement and aggregate producers, and CEMEX Polska is one of the company's 50 global subsidiaries that generate \$14.3 billion in annual revenues. The group provides 43,000 jobs worldwide and has business in 108 countries. In Poland it has a staff of nearly 1,200 people working at over 40 cement plants, 7 aggregate mines and the Warsaw offices.

CHALLENGES

CEMEX is known for the outstanding safety and quality of its products. Behind the implementation of the LEGACY solution was one goal: zero accidents at work and sustained or improved safety and energy standards as well as environmental and energy management standards. The company also aimed to provide for proper organization and consistency of their internal processes as their staff used to put ample time and effort into processing paper documents and operations in calculation sheets and e-mail communication. This called for a single solution to optimize all of these processes.

SOLUTION

Comarch ECM had all of the functionalities needed. The solution customized to CEMEX's needs comprised three modules. The first of them, **Comarch ECM Quality Management** enabled the customer to set up a central repository of all files related to product quality and services. It now provides for easy access to key documents and quick data retrieval for the staff of the quality and other departments. Thanks to the **Comarch ECM Contract Lifecycle Management component**, CEMEX can now set up a safe and internally consistent repository of all commercial contracts, and the staff of procurement, legal and accounting departments can quickly retrieve and check any contract on record. These two modules are complemented by

42
concrete plants

7
aggregate mines

Annual output of

2,3 mln
million tons of cement

Annual output of

1,8 mln
million m³ of concrete

Annual production of

4,2 mln
million tons of aggregate

Comarch ECM MailRoom, a tool for inbound and outbound e-mail management. E-mail repositories greatly facilitate e-mail management and timely insight retrieval. Functionalities such as a digital address book and an automatically generated log of sent e-mails streamline much of the administrative work and reduce the error rate. The solution has also helped the company to cut down on the amount of lost dispatches.

CEMEX chose to contract Comarch since it also offered expertise in deploying functionalities other than the key Quality Management product.

Additionally, the credentials from Grupa Górażdże, a large entity with a profile similar to CEMEX and part of the Heidelberg Cement Group, showed COMARCH's familiarity with that industry.

Catering for the industry-specific needs and individual needs of CEMEX's, the solution from Comarch covers:

- A timeline of audits
- Planning and running audits of internal system management and audits assessing environmental compliance
- Corrective and proactive actions
- Environmental and energy issues
- Environmental events and complaints
- A Health and Safety at Work scheme
- File updates and publishing

CEMEX representatives had put a strong emphasis on professional advice during our sales process, which led to defining the final solution. Comarch consultants offered their insight in screening the status quo and came up with a body of best practices in quality assurance and contracts processing. The fruit of our work was a solution tailor-made for CEMEX.

ECM'S ADVANTAGES

- Flexibility and versatility of the solution
- Comarch's technological and deployment expertise
- Previous cement industry experience and credentials
- Professional advice at the sales stage
- Repository of business partners
- Confidentiality groups
- Notifications on key dates
- A dedicated archive of contracts
- Advice and opinions from dedicated entities

“

As a technological partner, Comarch has assisted leaders of many industries in Europe and globally with delivering their projects. Of great significance has also been their previous experience with this unique industry. With their professional assistance, we succeeded in defining the solution as early as the sales stage and moved from negotiations to deployment in no time, with all modules being successfully deployed as scheduled. If you need a freely adjustable tool tailor-made for your industry or your plant, you may want to go for Comarch ECM. – **says Bartosz Wrębiak, Board Representative for Management System Integration**

CEMEX Polska

COMARCH

For 22 years, Comarch has been a producer and supplier of modern information systems, which streamline business processes through the use of technology. One of the important elements of the offer addressed to the largest enterprises is the Enterprise Content Management system. It is used by manufacturers, retailers, and financial institutions in 33 countries around the world. Comarch is trusted by leaders of various markets, such as Valeo, Technicolor, CEMEX, Rossmann, Eurocash, Valeant and Biomed. The completeness and flexibility of this solution allows you to increase the efficiency of the organization through automated capturing of data from various sources, efficient document management and optimisation of business processes including planning, monitoring of the status, and reporting. Lower costs, efficient time management, increased control over documents, processes and employees, as well as increased security and easier access to information, are just some of the advantages of this Comarch solution.
