

## COMARCH EHR

Archiving medical documents and searching for data via a web browser

# COMARCH EHR

Comarch EHR is an IT system used for managing e-documentation in all kinds of medical service facilities. Central access to documents originating from various systems offers efficient gathering and processing of medical data. This innovative solution supports physicians in making the right diagnosis and saves time for patients and medical staff alike.

## SYSTEM ADVANTAGES

### COMPREHENSIVE APPROACH TO HEALTH

The system ensures access to all of the medical data gathered about a patient in the course of treatment

### INTELLIGENT SEARCH ENGINE

Easy access to the desired information included in medical documentation via state-of-the-art search mechanisms

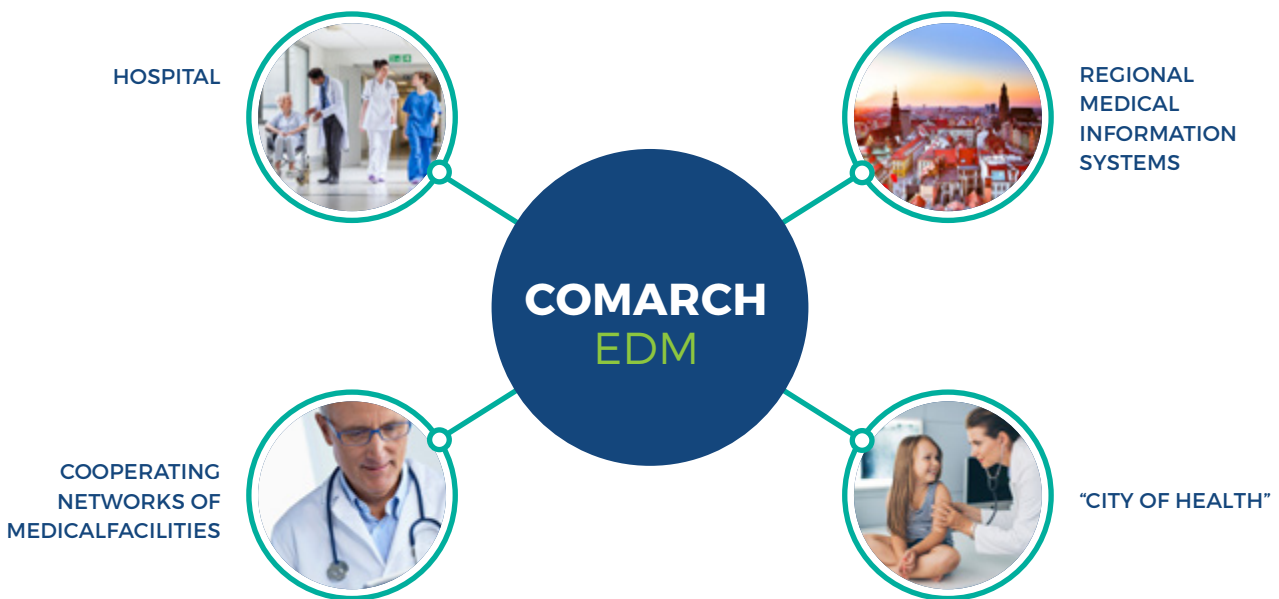

### EXCHANGE OF DOCUMENTATION BETWEEN FACILITIES

Efficient exchange of information between medical service providers accelerates the process of making diagnoses and avoids redundant testing

## FUNCTIONALITIES

- safe archive
- the most important information is isolated from the document in the form of a Patient Record
- test results and selected documents made available through the Patient Portal
- export of documentation via XML and PDF formats
- support for HL7 CDA and XDS.b standards
- possibility of integrating many source systems provided by various manufacturers
- versioning and comparing the contents of medical documents
- use of electronic signatures, assurance of cryptographic cards
- possibility of scanning paper documents, presenting test results in a user-friendly manner

## AREAS OF APPLICATION

## ALREADY TRUSTED BY

Comarch EDM has already been implemented in 57 medical centers, including:

- Independent Public Healthcare Center – Jędrzej Śniadecki Regional General Hospital in Białystok
- Stefan Cardinal Wyszyński Regional Hospital in Łomża
- Regional Hospital in Poznań
- Dr. Ludwik Rydygier Regional Hospital in Suwałki
- Ludwik Rydygier Specialist Hospital in Krakow, Sp. z o.o.
- Warsaw Children's Hospital
