# Comarch Training Center Offer

# About Comarch Training Center

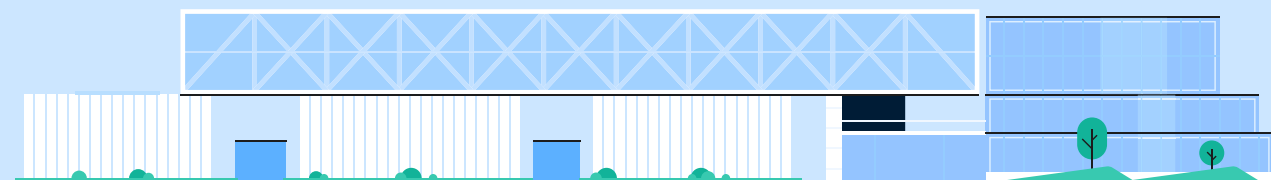

The Comarch Training Center is the place where theory meets practice and the expertise of our specialists is transformed into practical skills of the participants. As a leader in IT training, we specialize in courses on data analysis, process automation, cloud solutions and databases. Our courses are delivered by experienced instructors who have both extensive real-world experience and strong teaching skills. Our goal is to provide students with the tools they need to work effectively in a modern business environment.

In addition to offering a wide range of courses, we also provide a personalized approach for each participant, ensuring that the learning experience is more effective and tailored to the needs of the job market!

# Comarch E-learning Training

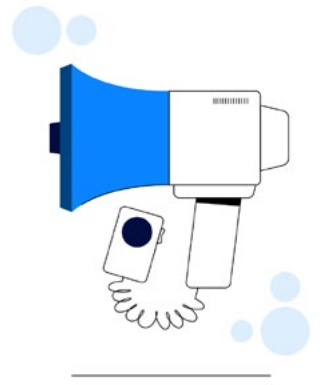

E-learning training is an innovative form of education that allows for the acquisition of knowledge and skills in a flexible manner, tailored to individual needs. With access to e-learning platforms, participants can learn anytime and anywhere, making it easier to balance professional development with daily responsibilities. Courses are enriched with interactive materials, videos, quizzes, and simulations to engage participants and facilitate knowledge retention.

By choosing Comarch e-learning training, participants also have continuous access to the latest training materials, which are regularly updated to reflect current trends and industry changes. This type of training not only reduces the costs associated with travel and accommodation, but also provides a wide range of readily available resources, enabling the acquisition of modern skills in a convenient and efficient way.

# Training Categories

## [MS Excel and VBA](#)

Whether you're a beginner or an advanced data analyst, our training courses will help you fully leverage the potential of this powerful tool. We offer courses that cover the entire range of Microsoft Excel functionality, from basic data analysis to advanced visualization and reporting techniques.

VBA (Visual Basic for Applications) is a programming language that allows you to automate routine tasks in Excel. Our training covers creating macros, programming custom functions, and integrating Excel with other Microsoft Office applications. It's the perfect solution for those who want to increase efficiency and automate daily processes.

Improve your Excel and VBA skills - enroll now!

## [Power BI](#)

Power BI is an advanced data analysis and visualization tool that lets you create interactive reports and dashboards. Our training courses are designed for both beginners and advanced users. Participants will learn how to integrate data from multiple sources, create advanced DAX formulas, and visualize data in ways that improve business decisions.

Sign up now to take your data analysis to the next level with Power BI!

## [Database Training](#)

We offer training on three major database systems: Microsoft SQL Server, PostgreSQL, and Oracle Database Server. Our courses are designed for data analysts, BI professionals, developers, and database administrators. Students learn how to efficiently manage databases, optimize their performance, and integrate them with other systems.

Our training provides a comprehensive approach to database management, covering everything from basic operations to advanced tuning techniques. With our courses, you'll gain practical skills that will enhance your ability to work effectively with data in your daily tasks.

# Cloud Solutions: Terraform, Docker, Podman, Kubernetes

[Read more](#)

## Terraform - Automate Cloud Infrastructure Management

Cloud solutions are becoming increasingly popular in the modern enterprise, and the ability to manage cloud infrastructure is invaluable. Our Terraform course teaches how to effectively use the Infrastructure as Code (IaC) approach to automate the creation and management of cloud infrastructure. The course includes both theory and hands-on labs on the Linux platform.

## Containerization - Docker, Podman

Containerization is a modern approach to managing applications, allowing them to run in isolated environments. Our courses cover Docker and its alternative, Podman. Participants will learn how to create and manage containers, which will help optimize resource utilization and simplify application management.

## Kubernetes

Kubernetes is the most popular container orchestration platform, enabling efficient management of applications in a cloud environment. Our training covers the fundamentals of Kubernetes and the practical skills needed to manage applications in multi-module cloud environments.
