

Requirements for the remote participant:

1. In order to use an IT platform dedicated to participate in remote proceedings using electronic means of communication, each shareholder entitled to remote voting should have:
 - a. Internet connection to the public network with a minimum bandwidth of 4 Mbps (suggested constant bandwidth when using the platform),
 - b. a computer equipped with speakers, video receiving, working under the control of the Windows 10 or macOS operating system with one of the following browsers installed on it: Chrome, Firefox, Edge or Safari in the latest version (all browsers listed are freely available for download on the public Internet network). The use of Internet Explorer is not recommended.
2. Lower bandwidth of the Internet connection and older versions of browsers may cause difficulties or prevent communication with the GM meeting room, delay the transmission, and prevent voting.
3. While using the platform, it is suggested that the user not use other applications that significantly burden the computer and communication link used by the platform.
