

COMARCH

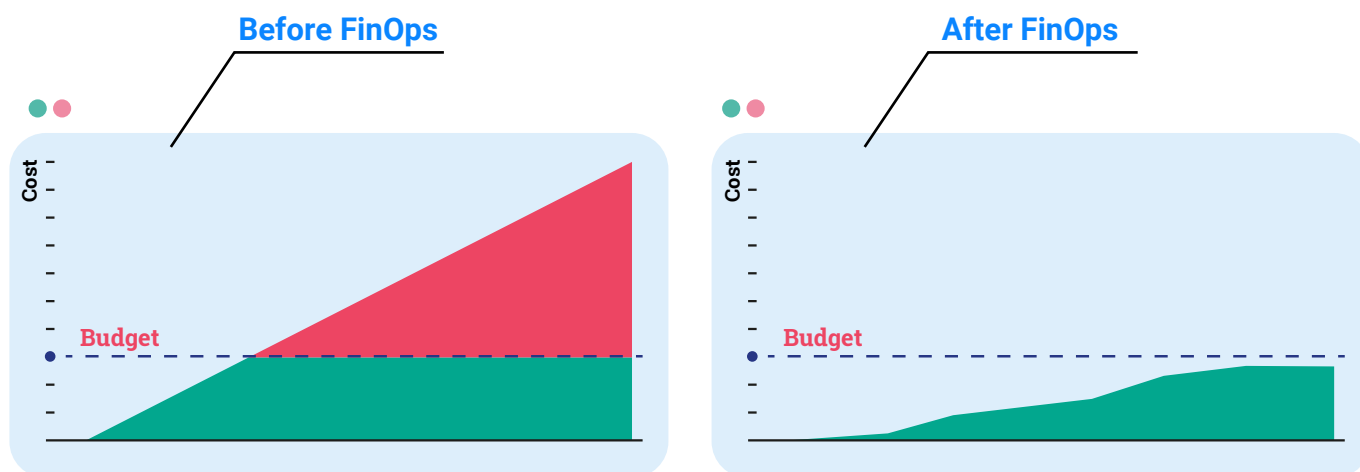

# Does Your Company Know How to Optimize Cloud Cost-efficiently?

FinOps methodology at Comarch

# Improve the Multi-team Cooperation to Optimize Finances

- How often do you verify maintenance costs at the development stage?
- Are you aware that, by optimizing cloud services, you can increase ROI significantly?
- Did you know that the key to maximizing the business value of your company is understanding how to create effective collaboration between engineering, finance, technology and business teams on data-related financial decisions?

Let Comarch's experts switch your mindset to FinOps-driven!

## Deep-dive into Financial Optimization with Comarch

With the help of Comarch's experts, you'll improve **resource-aware collaboration between production, operation and business**. Additionally, we will evangelize on how to use FinOps during the conceptualization, development, and support of the solution. Thanks to our experienced team, you'll be able to optimize cloud usage within the whole lifecycle of a product.

## How Do We Achieve It?

Comarch equips you with practical knowledge and know-how on optimization and better construction of the software architecture, so your company's terminal dues will drop significantly. Our professional team, experienced in FinOps-driven development, will create solutions in the way of cloud financial optimization.

Developers – make the code costefficient; experienced in serverless microservices

IT architects – include cost estimates in system design; choose the appropriate database model to optimize the costs

DevOps – automate deployment-related tasks, set up cost monitoring

Product owners – awareness of how business requirements affect system finances

## Comarch

Comarch (headquartered in Kraków) is a stable and experienced leading global IT software house with a portfolio of thousands of complex, innovative and successful IT projects and implementations of software development for more than 40,000 companies worldwide, having wide knowledge of IT systems and solutions including cloud services, IoT ecosystems and embedded software.
