

COMARCH

Diagnostic Point

Basic examinations without the need to visit
a medical facility

The Comarch Diagnostic Point allows you to conduct tests of basic vital signs, independently or with the assistance of a nurse. The solution was created in response to the growing demand for universal and convenient healthcare. The point is available in two versions: (stationary and mobile) and in two modes (basic and extended).

Basic mode

Extended mode

Tests available in the basic version and:

Glucometer

Stethoscope

Otoscope

12-lead ECG

Dermatoscope

Thermometer

Pressure gauge

Pulse oximeter

ECG event

Scales

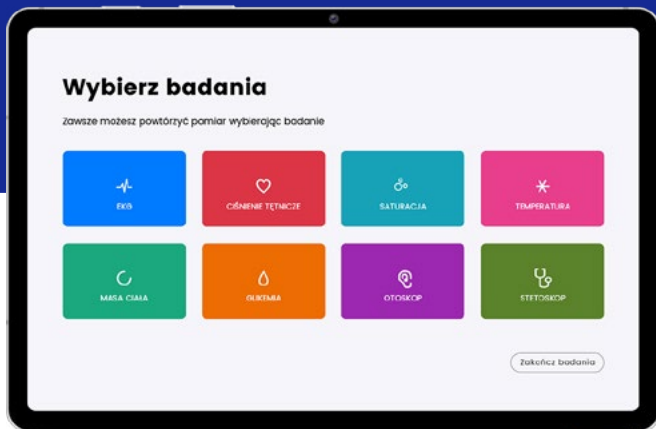

+ nurse assistance

Operation

The operation of the Diagnostic Point is based on an application installed on a tablet, which guides the patient step by step through all stages of the examination. The system is connected with external sensors with which the patient performs tests. The collected data is sent to the [Remote Medical Care Center](#), where it is analyzed. Thanks to integration with the [e-Care](#) platform, the Diagnostic Point allows you to establish a video call with medical staff who can help you go through the examination process or provide consultations and indications after its completion.

Diagnostic Point + Comarch Optimed NXT

Thanks to the possibility of integrating Diagnostic Points with the HIS Comarch Optimed NXT system, the results of tests can be available immediately in the patient record in the Optimed NXT program. For more information about this type of implementation of the Diagnostic Point, please contact us.

1. The patient provides their telephone number, to which they receives an authorization code.
2. The next step is to accept consents and complete a short survey.
3. The patient, guided by the application, performs tests.
4. After completing the tests, the results are sent and then analyzed at the Remote Medical Care Center.
5. The patient receives an email report with the analyzed test results.

For whom?

Medical facilities – a set of basic examinations for which patients do not have to make an appointment and wait in line for their implementation. In the case of already arranged visits, patients can use the waiting time to carry out tests on their own, which do not have to be repeated by medical staff later. Simple operation and remote support ensure a safe and fully professional examination process.

Corporations – an attractive addition to the social package, which will allow employees to take care of their health through easier access to preventive examinations. Comfortable conditions for conducting examinations in the workplace will minimize the time spent on visits to medical facilities.

Insurance sector – streamlining the process of signing an insurance policy with tools to carry out the necessary on-site examinations. Removes the need for cooperation with medical facilities and minimizes the risk of inaccurate health evaluation.

Advantages of the solution

Increasing the effectiveness of prevention, diagnostics and therapy

Save time

Reduce healthcare costs

Convenience for patients and medical staff
