Phishing terms you should know

Phishing
Tricking someone into revealing sensitive information through fake emails, messages, or websites.

Smishing
Phishing via SMS. You get a fake text asking you to click a malicious link or share data.

Vishing
Voice phishing. Scammers call pretending to be from a bank, IT support, etc.

Spear Phishing
Targeted phishing. A personalized message that looks like it's from someone you trust.

OSINT (Open Source Intelligence)
Freely available data that attackers use to personalize phishing attacks (e.g. LinkedIn, Facebook, company websites).

Spoofing
Faking an identity - email address, phone number, or URL - to appear legitimate.

Pharming
Redirecting you from a real website to a fake one, even if you typed the correct address.

URL Hijacking / Typosquatting
Registering domain names that look similar to real ones (e.g. **paypal**.com vs. **peypel**.com) to steal data.

🔐 **Stay alert. Stay secure. Every click counts.**
